

CALL FOR PAPERS

IMPORTANT DATES

March 15, 2023

Extended abstracts due

April 30, 2023

Final submissions due

ORGANIZING COMMITTEE

CONFERENCE CHAIRS

Andrea Belz

USC Viterbi School of Engineering

Lydia McClure

Research Bridge Partners

LOCAL ARRANGEMENTS CHAIR

Precious McClendon

University of Southern California

TECHNICAL PROGRAM CHAIRS

Fernando Zapatero

Boston University

Tim Folta

University of Connecticut

TECHNICAL COMMITTEE

Lien Denoo

Tilburg University

Jeremy Eckhause

RAND Corporation

Alexandra Graddy-Reed

University of Southern California

Tatiana Manolova

Bentley University

Richard Terrile

Caltech / Jet Propulsion Laboratory

WOMEN IN ENGINEERING CHAIR

Bouthina Tlili

Rochester Institute of Technology

YOUNG PROFESSIONAL CHAIR

Alex Klonoff

Kinexum Services

SPONSORS

USC Viterbi

School of Engineering

The IEEE Conference on Innovation Management is the premier event for engineering innovation leadership to share best practices and build relationships. The conference is focused on addressing deep technology entrepreneurship, innovation, and portfolio management. It is the only conference where:

- » Scholars present cutting-edge research to stakeholders to generate impact
- » Policymakers engage with the academic community and new ventures alike
- » Public, private, and corporate investors meet startups launching new solutions

Technical presentations will be open to public and private venture investors, and will be followed by roundtables for active discussions.

This Call invites papers reporting original work or state-of-the-art reviews that enhance knowledge of: (1) deep technology and engineering entrepreneurship; (2) systems engineering, portfolio modeling, and management science; (3) operational models for driving technology development and industrial growth; (4) public-private partnerships and other government interventions; (5) access for underserved populations and communities to participate in engineering leadership; and (6) other topics of interest to the deep technology management community.

The technical program for InnoConf 2023 will be determined by the interests of participants submitting for publication, presenting a technical paper, or organizing a technical session. Three Best Paper awards will be awarded at the 2023 InnoConf on the topics of Public Policy, General Innovation, and Student Paper. Authors do not need to be IEEE members to be eligible for these awards.

Papers will be fully peer-reviewed, published in the IEEE Proceedings, and indexed by EI/Compendex. Authors must present their papers in person; there will not be a hybrid option. Failure to follow abstract guidelines may result in papers being returned without review. Submissions for peer review should be extended abstracts covering appropriate topics, while final conference papers must be submitted using the IEEE conference templates here for publication in the Proceedings. See the formatting guidelines for specifics on both the extended abstract and the final Proceedings.

TOPICS

- » Space Innovation
- » Systems engineering approaches to managing deep innovation portfolios
- » Financial and strategic portfolio management of engineering innovation
- » Artificial Intelligence (AI) methods and tools in innovation management research
- » Gender, diversity, and access in deep technology innovation
- » Government policy and performance in engineering entrepreneurship
- » Private financing of engineering startups
- » Other topics of interest

Program Speakers

Alex Andrianopolous

Kairos Ventures

Swati Chaturvedi

Propel(x)

Andy Chen

REDDS Capital

Hannah Dvorak Carbone

California Institute of Technology

Tim Graves

Aerospace Corporation

Ken Hayes

Clean Tech Open

Sudeendra Koushik

CampX Bangalore, Volvo Group

Stephen Koziol

USPTO

David Lane

1Flourish Capital
